

## **INGRESS THROTTLING VIA ADAPTIVE INTERRUPT DELAY SCHEDULING**

### **ABSTRACT OF THE DISCLOSURE**

10055922.012802

An arrangement is provided for ingress throttling via adaptive interrupt delay scheduling. When packets are received, a receive interrupt is issued with a delay determined based on the backlog information of an associated host, gathered from the number of packets returned from the host after the completion of processing previously delivered packets.
